(54) Title: HEATING DEVICE

(57) Abstract: Device for induction heating of ring-shaped objects, including a magnetizable core with one or several coils, which core has a moveable part that is displaceable, for insertion through the ring-shaped object that is to be heated. The object that is to be heated rests on rails or bars on which the object can slide electrically and thermally insulated. The device is inclined laterally so that the objects that are to be heated can slide in to and/or out from the heating position.
